Font Management Software

- It is advised to use software to manage your fonts as thousands of active fonts on your computer can hinder performance.
- Font Management software can store, sort, activate and deactivate large quantities of fonts at a time.
- Can be activated by client
- Can be used to browse by style (*ie. All script fonts*)
- Can be used to browse using custom text (*ie. Typing in a name to see how it appears in that font,or search all & characters*)
- Can perform font repairs or detect damaged fonts

Font Management: FontBook

- Ships with Mac OS

Font Management: Extensis Suitcase

- One of the oldest FMs
- Available for teams across server

Overset Text

- Overset text is indicated by a red plus sign on the end of your type bounding box.
- InDesign will alert overset text when you package, but it's best to avoid overset text in your type box, even if it is just an empty paragraph character.
 - Sometimes the overset text is the culprit behind missing fonts or other type/layout issues.

Creating Outlines of your text

- When type no longer needs to be edited,
 OR if you want to create a duplicate version of text or art, you can convert your type into outlines.
- This is often encouraged for providing to vendors with older software or when you want to insure no font replacement or editing occurs.

Free Fonts

It may be tempting to use free fonts but there are often hidden prices you pay for these fonts:

- Improperly designed fonts may be missing required settings that will cause the font to corrupt or applications to crash
- Many do not have a complete character set, which will require you to swap out fonts midline.
- Many have inconsistent kerning, so it will look less professional, or require a lot of cleaning up
- Many have bad font hinting (Jagged instead of crisp screen view).
- No output/printer portion of the font (won't be able to export or print)
